Meeting Room Booking

Here at Leaplearner we have a few meeting rooms and more than 100 employees. With this disbalance, setting up a meeting becomes a hassle sometimes. We want to develop a meeting room booking application for our internal use so that employees can book a meeting room without any hassle or clash.

Requirements:

- Design a layout using the image given below
- Upon creating a booking, user should see a calendar event in his Google Calendar (notification not required)
- Current layout is a single step process, try to break it into two steps.
- Use Angular, React, VUE OR Next JS (using Redux will be a plus) for front-end layer and Node OR Python for backend layer/logic
- Feel free to use any calendar React component.

Fell free to add more meaning functionalities if you feel like.
